

Playwize Ltd (the online gaming sister company of Bits Studios Ltd, The long established video game developer), currently has vacancies the following programmers to join our online gaming product development team. Playwize recently launched Pokerwize our innovative new online poker client with offline game and built in tutorial.

Our products include many online features that are unique in the online gaming industry, the successful candidates will be responsible for the client side network programming to support new features within current products and future developments.

All roles require hardworking team players.

## Application Build / Tools Programmer

Our products will be made available in many variations of the core software, these variations will include graphical variations for branding and skinning and localization for many different regions. The role will involve developing tools to organize data and automate the build process in order that the core code can support many different installable versions.

The following skills are essential:

- C++
- STL
- Installshield
- Windows programming.
- Use of a source control system (any of Sourcesafe, CVS, Subversion, Perforce)

These additional skills will be useful:

- Setup and admin of a source control system (same list)
- Release management experience
- Windows ATL
- SQL, XML and PHP would also be useful, but lower priority than the rest.
